MATERIALS

At Design Specialties we are constantly evaluating materials. Most of our products are available in multiple materials and colors. Our sales specialist will work with you to determine the right material to meet your needs. All materials meet F.D.A. food contact requirements.

High Temperature Material

For applications requiring temperature tolerances **up to 400°F** - Cook-chill or Re-therm applications.

Choice of 4 materials

Ultraguard™

Virtually unbreakable.

Softer than Ultem and Radel, but more rigid than Hi Flex.

Hi Flex™

Virtually unbreakable.

Flexible.

Radel®

High Impact.

Transparent.

Ultem™

Good Impact.

Transparent.

Polycarbonate

For applications requiring temperature tolerances **up to 230°F**

We use a special blend of polycarbonate that is extra strong and durable. It has a shiny finish and is long lasting. Will not scuff or stain. Our blend resists chemicals better than regular polycarbonate.

Econoblend

For applications requiring temperature tolerances **up to 210°F**

We use special blends of copolymers and other olefins for extremely break-resistant, long-lasting economical products. Will not break down with chemical use.

Flexible Material

For applications requiring flexible products in high-security areas. – Choice of 2 materials

Xtremflex™

Extremely Flexible.

Can handle up to **300°F**

Tuf-flex

Flexible. Will not tear.

Can handle up to **210°F**
